

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

Claims 1-10 (Canceled).

11. (Previously Presented) A process for purifying and cooling a gas stream comprising a dialkyl ester A) of an aromatic dicarboxylic acid, which comprises treating the gas stream with an aliphatic dihydroxy compound B) at a temperature less than/equal to the melting point of the dialkyl ester A) in a 1st stage and treating the gas stream with an aliphatic dihydroxy compound B) at above the melting point of the dihydroxy compound B) in at least one second stage, wherein the dihydroxy compound B) has a temperature less than/equal to 140°C in the first stage and has a temperature of from 20 to 80°C in the second stage.
12. (Previously Presented) The process according to claim 11, wherein the dialkyl ester A) is an ester of terephthalic acid, isophthalic acid, 2,6-naphthalenedicarboxylic acid or a mixture thereof.
13. (Previously Presented) The process according to claim 11, wherein the dialkyl ester A) has alkyl radicals having from 1 to 4 carbon atoms.
14. (Previously Presented) The process according to claim 11, wherein the gas stream which is purified and cooled is a laden inert gas stream.
15. (Previously Presented) The process according to claim 11, wherein the dihydroxy compound B) used is a diol having from 2 to 6 carbon atoms.
16. (Previously Presented) The process according to claim 11, wherein the dihydroxy compound B) used is 1,4-butanediol.
17. (Previously Presented) The process according to claim 11, wherein the dialkyl ester A) is dimethyl terephthalate.

18. (Previously Presented) The process according to claim 11, wherein the degree of saturation of the gas stream with respect to the dialkyl ester is less than/equal to 50%.
19. (Previously Presented) The process according to claim 11, wherein the gas stream contains less than 20 ppm by weight of the aromatic dialkyl ester A) after purification and cooling.
20. (Previously Presented) The process according to claim 11, wherein the temperature of the second stage is cooler than the temperature of the first stage.
21. (New) The process according to claim 11, wherein the temperature of the first stage is 140°C to 50°C.
22. (New) The process according to claim 11, wherein the temperature of the first stage is 136°C to 60°C.
23. (New) The process according to claim 11, wherein the temperature of the first stage is 124°C to 110°C.
24. (New) The process according to claim 11, wherein the temperature of the second stage is 50-70°C.
25. (New) The process according to claim 20, wherein the temperature of the second stage is 50-70°C.
26. (New) The process according to claim 21, wherein the temperature of the second stage is 50-70°C.
27. (New) The process according to claim 22, wherein the temperature of the second stage is 50-70°C.
28. (New) The process according to claim 23, wherein the temperature of the second stage is 50-70°C.

29. (New) The process according to claim 21, wherein the temperature of the first stage is 140°C to 50°C.
30. (New) The process according to claim 22, wherein the temperature of the first stage is 136°C to 60°C.
